Professional Summary

Mobile Software Engineer specialized in **Flutter and Dart**, building **R10 Score**, a football live-scores and statistics app with **1M+ downloads** on Google Play. In a production Flutter monorepo I have merged **500+ pull requests** and performed **570+ code reviews**, delivering features end to end, from Figma and API contracts to tested releases on both stores. Author of **collector_flutter**, an open-source performance-monitoring package published on pub.dev.

Background in Systems Engineering (UFMG) and hands-on experience with **React, React Native, Java and Spring**. I work closely with product, design, backend and QA teams in agile environments, with a strong focus on clean architecture, automated testing and root-cause debugging.

Technical Skills

Mobile Development: Flutter, Dart, Android, iOS, BLoC, go_router, freezed, Firebase, React Native

Real-time & APIs: REST APIs, JSON, gRPC streaming, WebSocket, Swagger / OpenAPI

Frontend Development: React, responsive interfaces, reusable UI components, design systems

Backend & Cloud: Java, Spring, AWS CDK, AWS Lambda, Amazon SQS, MongoDB

Programming Languages & Data: Dart, Java, JavaScript, TypeScript, Python, C, C++, SQL

Architecture & Engineering: Clean Architecture, Clean Code, modular monorepos, refactoring, performance monitoring

Software Quality: Unit, widget and BLoC tests (mocktail, bloc_test), Code Review, debugging, static analysis, Software Security

Delivery & Collaboration: Git, GitHub, GitHub Actions, CI/CD, Azure DevOps, Figma, Pull Requests, Scrum, Kanban, Agile

Professional Experience

Mobile Software Developer | Flutter Developer

May 2025 – Present

R10 Score | OTG VENTURES LTDA

- Build and maintain **R10 Score**, a football live-scores, statistics and betting-tips app with **1M+ Google Play downloads** and a **4.5-star App Store rating**, in a Flutter monorepo with 11 packages (BLoC, go_router, freezed, REST, gRPC and WebSocket).
- Merged **500+ pull requests** and performed **570+ code reviews** across the mobile app, backend hub and architecture-docs repositories, under strict static-analysis rules.
- Delivered the **Mural bet-wall tab**, a drag-and-drop ticket grid with backend-persisted order and live WebSocket updates, splitting a 148-file feature into 5 stacked, independently reviewable pull requests.
- Built the **2026 World Cup experience** (CMS-driven tabs, paginated guess leaderboard, match and team headers) across **49 merged pull requests** for the tournament period.
- When Google Play began rejecting uploads after the August 2026 target-API deadline, raised targetSdk to 36 and upgraded Play Billing Library to 8.0.0, **unblocking store publishing** for the next release.
- Traced an intermittent freeze in match-statistics navigation to **two independent root causes** (an animation/state race and a subtree remount), fixed both and added timing-based regression tests.
- Restored the app test suite from 8 failing to **388/388 passing** by fixing 3 root causes, including 2 real production bugs in splash navigation and BLoC state handling.
- Validate API contracts with backend (Swagger), turn Figma specs into reusable components with design, and prepare releases with QA and product in Azure DevOps; also contribute to Tyty and React web projects.

Programming Instructor

2024 – 2025

Garotas Aplicadas Project – AVEC | Centro Universitário Una

- To widen female participation in technology, taught theory and hands-on programming classes to public high-school girls from Belo Horizonte and its metropolitan region, turning technical concepts into accessible lessons.
- Supported entrepreneurship, career-development and professional preparation activities, helping participants build both technical and interpersonal skills.

Drum Coach | International Project – Germany

- Built an interactive **Flutter and Dart** app that helps musicians and beginners learn and practice drums, with responsive, dynamic interfaces designed for an engaging learning experience.
- Delivered autonomously while collaborating remotely with an international team, strengthening distributed development and technical communication.

Mobile Developer

2022 – 2025

Prime Results

- Delivered mobile features end to end in **Flutter and Dart**, from **Figma** specifications through **REST API** integration, testing and release.
- Worked across the stack, contributing to backend services in **Java and Spring** and to **React** web projects.
- Applied **Clean Code and Clean Architecture** principles and took part in code reviews, automated testing and security practices, making the codebases easier to maintain, scale and evolve.

Business Analyst & Front-End Developer

2021 – 2022

iJunior

- Worked with clients and the sales team to gather business requirements and translate them into viable digital solutions, bridging business and technology.
- Built customized apps and websites with **React Native** and frontend technologies for organizations across different sectors, using **Scrum and Kanban** for iterative delivery.

Systems Analyst

2020 – 2021

Interact Place

- Helped build an interactive mobile exhibition guide for **Palácio das Artes**, one of Belo Horizonte's major cultural institutions, where QR codes connect visitors to information about artworks, making cultural content more accessible and engaging.

 Projects**collector_flutter** | pub.dev/packages/collector_flutter

Open-source Flutter plugin for real-time performance monitoring (FPS, jank, memory, CPU, battery, HTTP traffic and custom events) with an in-app dashboard and heuristic recommendations, built with Clean Architecture. Published on pub.dev with **150/160 pub points**; developed as my undergraduate thesis at UFMG.

Road Network Detection | github.com/BeatrizVocurcaFrade/trabalho_rp

Team project (UFMG Pattern Recognition): Python computer-vision pipeline that detects roads in satellite images with color and texture cues, a Frangi ridge filter and oriented morphology, and explores graph reconstruction of the road network.

 Education**Bachelor's Degree in Systems Engineering**

2020 – 2026

Federal University of Minas Gerais – UFMG

Thesis: Monitoring and Optimizing Resource Consumption in Flutter Apps (collector_flutter), advised by Prof. Ramon Lacerda Marques.

High School

2014 – 2019

Colégio Nossa Senhora das Dores

 Languages**Portuguese:** Native**English:** TOEFL certified; English language program at CCAA – Floresta (2008 – 2019)
